Summary

Serology: the tested rat was negative for all tested pathogens.

*We consider serology mice test positive for Murine norovirus (MNV).

Bacteriology: the tested rat was negative for all tested pathogens.

**We consider rat samples positive for Helicobacter spp.

Parasitology: sentinel rat samples were negative for fur mites (ectoparasites) and pinworms (endoparasites).

Pathology: no observed lesions.

Notes: *Viridans* group α -*Streptococcus*, coagulase negative *Staphylococcus sp.*, *Enterococcus sp.*, *Lactobacillus spp.*, *Lactococcus sp.* and *Escherichia coli* are all common components of the microbiota. *Trichomonas*, *Chilomastix* and *Entamoeba* are all common intestinal protozoa.
