The TAD Health and Biomedical Community meeting

Sunday 5/12/2021 13:00 Porter School at TAU

The overall aim of our community is to improve our understanding of health and disease processes and to advance public health and better cures. We will bring together scientists from the fields of medicine, life sciences, core artificial intelligence and data science to share ideas and form new collaborations. We will also invite leaders from the industry who work with biomedical data science and artificial intelligence to present, discuss and facilitate collaborations.

We will meet on the first Sunday of each month, at 13:00 at the Porter School of Environmental Science (right outside the TAU engineering gate).

The first talk: Dr. Yair Daon, Post-doc at the School of Public Health and the Porter School of the Environment and Earth Sciences, TAU, titled:

"DOPE: d-optimal pooling experimental design with applications for SARS-CoV-2 screening".

Come early for the get-together and the food and drinks!

Any ideas for future talks are welcome
